

Amendments to the Specification

Please replace the third paragraph on page 4 (lines 14 through 18) with the following amended paragraph:

In the mobile radio network, a comparison now takes place to determine the conformity or matching of the received response SRES to all the SRES values held for the used RAND so that if a match is met between ~~two user-specific~~ the responses SRES (returned from the SIM) and a SRES (stored in the mobile radio network), the user's authentication is validated.
